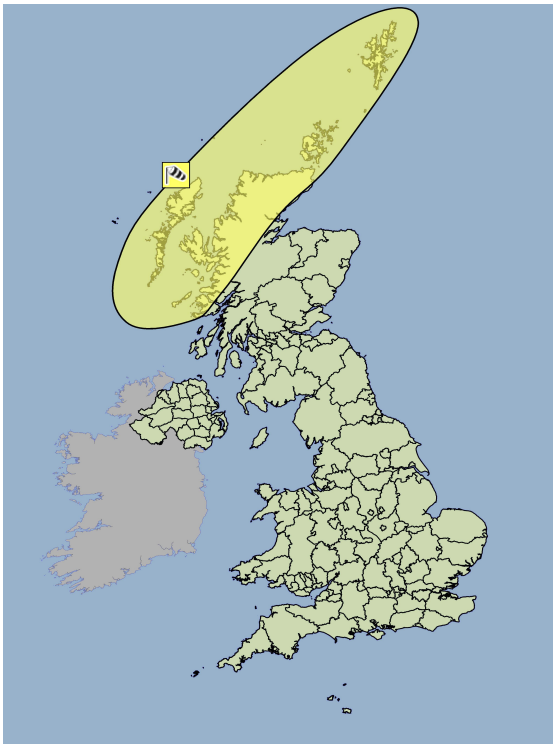
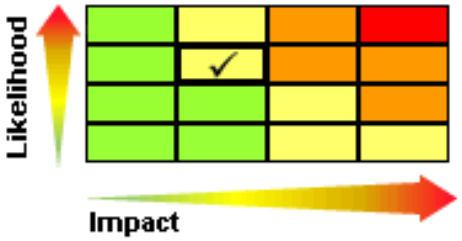
National Severe Weather Warning Service





Chief Forecasters Assessment
A deep low is set to develop near northwest Scotland late on Sunday. The system is complex, as it initially involves two separate low centres, one of which swings round to the southwest of the other. One effect of this is to enhance the swathe of very strong winds, but it also means that the exact outcome is more difficult to determine, so further updates to this warning are likely.

The Met Office have issued a **Yellow Warning** of **Wind**

Valid from **09:00 on Mon, 16th Nov 2015** until **23:45 on Mon, 16th Nov 2015**

Southwesterly winds will increase during Monday morning, when severe gales will affect parts of northwest mainland of Scotland and the Western Isles, extending to the Northern Isles during the afternoon. Later in the day the strongest winds should ease from the south of the warning area.

Gusts of wind of 65-75 mph are expected in places, so be aware that there may be some further disruption to travel. Additionally, large waves may cause some overtopping of sea defences.
